Docker Fundamentals

Mohamed Romdhani

E-mail : m.romdhani@businesstraining.be

May 2020

Objectives

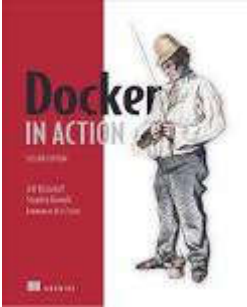

This course provides essential foundational knowledge for Docker and containerization. It covers all the fundamentals of Docker including containers, Dockerfiles, volumes management, networking, and more.

The participants will develop a thorough understanding of the Docker fundamentals through a hands-on approach.

Content

Units	Titles
Unit 01	Introduction to Docker
Unit 02	Working with images and containers
Unit 03	Creating custom images
Unit 04	Volumes and Networking
Unit 05	Docker Compose
Unit 06	Docker security best practices
